High Honor Awarded to Katti

The American Institute for Medical and Biological Engineering’s College of Fellows recently inducted Kalpana Katti, NDSU Distinguished Professor of civil and environmental engineering, for exceptional contributions to biomaterials science with the development of engineered nanoclays for biomaterials. She has also been an advocate for women in science.

In addition to serving as the NDSU Department of Civil and Environmental Engineering’s graduate program coordinator, she is a mentor to many students, including ND EPSCoR’s Doctoral Dissertation Assistantship (DDA) program awardee MD Shahjahan Molla. Molla has assisted in research for several projects relating to novel uses of biomaterials.

The ND EPSCoR DDA program is designed to increase the completion rate of Ph.D. students enrolled in the science, engineering, and mathematics disciplines at North Dakota’s two research-intensive universities, and increase the number of competitive proposals submitted to the National Science Foundation.
